

**Unfortunately, potholes are
everywhere you're headed.**

Fortunately, there's Bilstein.

We've all experienced the severe jolt from expansion joints, pot holes and other unfortunate road conditions. Since repaving America's highways wasn't an option, we made the shock better. Our engineers worked with Holiday Rambler and developed a newly designed shock featuring our NEW Comfitrac™ working piston. This piston is based on Bilstein's exclusive *High Frequency Bypass* valving technology and it reacts to sudden, high frequency harshness - like dropping a wheel into a pothole.

*Bilstein shocks featuring the Comfitrac™ piston, original equipment on 2002 and newer Roadmaster chassis, are **now available for retrofit applications on 2001 and earlier Roadmaster chassis.***

***It's All About
the PISTON!***
