

A photograph of a road with a pothole in the foreground. A Bilstein shock absorber is shown vertically on the right side of the image. The shock absorber has a blue top section with a silver mounting eye and a yellow bottom section with a silver mounting eye. The word "BILSTEIN" is visible on the yellow section.

**Unfortunately, potholes are  
every where you're headed.**

## ***Fortunately, there's Bilstein.***

We've all experienced the severe jolt from expansion joints, pot holes and other unfortunate road conditions. That's why you really need the added handling and control that Bilstein monotube gas pressure shocks provide. Upgrading to Bilstein shocks can dramatically improve your coach's ride. Bilstein's *technology leading* monotube gas pressure design delivers a superior ride, with optimum performance and increased control. Plus, with Bilstein, you don't get a generic "heavy duty" shock, but rather a shock designed specifically for your specific coach, providing you with a stable, precise and compliant ride.

*The huge self-adjusting digressive working piston inside a Bilstein shock instantly reacts to changing suspension input and adjusts for any condition...smooth road, rough road or no road. Provides maximum vehicle body motion control while maintaining superior comfort.*

For any class of motorhome, or your family car or truck, Bilstein shocks are simply the best choice.
